

ALFRA – Carbide Deburring End Mills Ø 8 - and 12

ALFRA Solid Carbide End Mill - Deburring End Mill (similar to DIN 6527)

- n These solid carbide end mills were especially developed for perfect deburring tasks.
- n The chips are moved off the motor spindle into the chip collector or into the chip channels.
- n Total length 60 mm or 80 mm.
- n **Coated type**

Premium solid carbide end mill on

TCT mill
End mill with larger chip spaces, suitable for wide bevels on soft materials, such as aluminium, brass, copper, plastics. Universal use with stainless steel and steel.

Ø	Cutting edges	Prod.-No.	Prod.-No.	Prod.-No.	Prod.-No.
8 mm	4	25150	25150	-	-
12 mm	3	-	-	25160	25160

Premium solid carbide end mill on

TCT mill
End mill with larger chip spaces, suitable for wider bevels. Universal use on stainless steel, steel, cast iron, non-ferrous metals, plastics

8 mm	5	25151	25151	-	-
12 mm	4	-	-	25161	25161

Premium solid carbide end mill on

TCT mill
for non-ferrous metals copper, brass, bronze, as well as short-chipping aluminium alloys.

8 mm	6	25152	25152	-	-
12 mm	8	-	-	25162	25162

Premium solid carbide end mill on

TCT mill
End mill for narrow bevels on steel, cast iron and short-chipping non-ferrous metals, as well as for hardened materials.

8 mm	14	25153	25153	-	-
12 mm	12	-	-	25164	25164

Premium solid carbide end mill on

TCT mill
rough toothing, fine knurl. **For the preparation of bevel mills.**
For steel, cast iron

8 mm	4	25154	25154	-	-
12 mm	4	-	-	25163	25163

n Solid carbide radius end mill
n For the chamfering of workpiece edges
n Versatile use. When processing hard materials, radii should be bevelled in separate work steps with increasing milling depth.
n The middle adjustment of the radius outline towards the edge of the workpiece is effected by the axial adjustment of the motor in the clamping eye.

Solid Carbide Radius End Mill*, right-hand twist

- R 3.0
- R 4.0
